

Sustainability Has Many Faces

A series of publications with materials on development cooperation –
a contribution towards the UN Decade on Education for Sustainable Development

The conservation of biological and cultural diversity is the basis for human development. The publications in this series address interdisciplinary and cross-national topics, and present the ‘faces’ of diversity, from South to North. Informative texts, interviews, information boxes and multimedia materials provide a deep insight into the everyday life of people in countries that might not be familiar to many readers. They demonstrate how rural people are finding ways to improve their livelihoods while conserving nature at the same time – and how they are being supported by German development cooperation and others. The reader is given the opportunity to see the world from different perspectives, and thus to gain a better understanding of global interdependencies.
